

Minimal Beamer Deck

Pandoc Skill Template

Template Author

2026-04-22

About this deck

A minimum working beamer template. Key workaround:

`--lua-filter=beamer-table-fix.lua` is required because pandoc 3.x emits `longtable` for any markdown table, and `longtable` is incompatible with beamer frame pagination (tables silently disappear otherwise).

- Pandoc maps ## to individual frames.
- Use ### for frame subtitles if needed.
- Inline math works here too: $e^{i\pi} + 1 = 0$.

Display math inside a frame:

$$\text{Speedup}(n) = \frac{T_{\text{CPU}}(n)}{T_{\text{GPU}}(n)}.$$

Citations also resolve on slides (1).

Variant	Time (s)	Speedup
CPU	120.0	1.0x
GPU	12.5	9.6x

- `theme:` and `colortheme:` map directly to `\usetheme{}` / `\usecolortheme{}`.
- `aspectratio:` 169 sets widescreen 16:9; omit for the beamer default 4:3.
- Without the Lua filter, the “Table Slide” renders as an empty frame.
- `## References {.allowframebreaks}` **must be the last heading** so `citeproc` places the bibliography inside that frame; otherwise pandoc attaches the bib to whatever heading happens to come last.

```
pandoc minimal-beamer.md \  
-t beamer \  
--pdf-engine=xelatex \  
--citeproc \  
--lua-filter=$HOME/.agents/skills/pandoc-markdown/scripts/beamer-table-fix.\  
-o minimal-beamer.pdf
```
